

E CLIPSE™

Specifications

Dimensions: H: 16.1" W: 11.8" D: 3.7"
Weight: 4.25 lbs
Amps: 0.34
Watts: 30 Watts
Ballast: Electronic (no separate starters)
Lamps: 2x15 Watt UVa T5
Warranty: 1 year

Introducing the Vector Eclipse fly trap, the latest member of the Vector family of superior flying insect control products. This decorative trap doesn't look like a bug light and that's the beauty of it. Its two 15 watt bulbs and Vector Universal Glueboard C provide the performance your customers need. Like all Vector light traps, the Eclipse is easy to service and install.

Perfect for restaurant dining areas and other front-of-house locations where discretion is required. Hidden glueboards prevent customers from seeing flies, and the brushed aluminum styling and LED accent lights create the appearance of a decorative wall light. This Vector Eclipse fly trap from Whitmire Micro-Gen combines function, style and serviceability.

Performance

- Two 15 watt bulbs deliver 30 watts of insect-attracting UV light
- Curved Eclipse light blades on each side bend light forward, for increased range and efficacy

Ease of Service

- Use Vector Universal Glueboard C—no need to stock an additional SKU on service vehicles
- Hinged cover makes servicing quick and easy

Style

- Long-lasting, low-energy LED accent lights and sleek brushed aluminum cover give the appearance of a decorative wall light

Installation and Maintenance Tips

General Positioning

- Mount vertically 3'-8' above the floor.
- Do not place traps in areas where they can be easily obstructed.

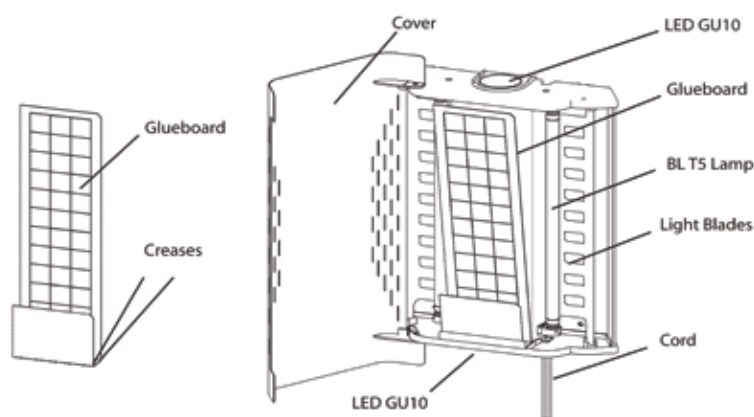

Best Trap Maintenance Practices

- Glueboards should be changed monthly, if possible. More frequent replacement is recommended in areas with heavy insect pressure.
- Bulbs should be replaced every 12 months. Replacement should take place at the beginning of the season when the heaviest flying insect pressure occurs—typically in the Spring.

Replacement Parts

- The Vector Universal Glueboard C (C is for the additional creases in the glueboard that allow for easy installation in the Eclipse) is a direct replacement for the current Vector Universal Glueboard. These universal glueboards fit into many industry light traps including the Vector Classic®, Plasma® and Plasma One™.
- 15 watt Vector Eclipse replacement bulbs.
- LED accent lights with safety fitting.

Total Protection

- Use in conjunction with the 72 watt Vector Plasma for total protection.
 - Front-of-House: Vector Eclipse for performance and discretion.
 - Back-of-House: Vector Plasma for superior attractiveness and large catch area.
