

# Guide to using products contained in Flea control kits

## Talstar PL

Apply the Talstar granules @ a rate of 2# per 1000 sq. ft. of yard. This will control fleas for 4-6 months outdoors. This is a great way to treat your yard for ants, grubs, fleas and ticks for the whole season.

## Tengard

Spray the Tengard @ a rate of 1 oz per 1000 sq. ft in sufficient water for a good knockdown of the biting adult fleas. Best to apply using a hose end sprayer , fleas cannot survive in direct sun areas so concentrate your efforts on covering shady and moist areas. Areas where your animals are resting, under sheds, homes, etc.

The Tengard also has a flea dip rate on the label for dogs. Please follow directions accordingly.

## Petcor Pet Spray

- Contains natural pyrethrins to immediately kill adult fleas.
- Precor IGR, an Insect Growth Regulator that kills flea eggs for 63 days after application.
- An effective addition to a flea control Integrated Pest Management (IPM) strategy.
- Approved for use on dogs, cats, puppies and kittens.
- Convenient - after you deliver it as part of your service, customers simply apply Petcor by spraying as needed.

### How It Works

The mobility of dogs and cats makes it difficult to treat all potential areas of flea infestation. So, it's important to consider a flea control formulation that goes where they do - especially one that targets pre-adult fleas, the source of reinfestations. Petcor<sup>®</sup> Flea Spray contains Precor<sup>®</sup> IGR, an Insect Growth Regulator that targets flea eggs on the animal by sterilizing them.

### Application Sites

- Coat of dogs, cats, puppies or kittens

## Precor 2000 Plus Premise Spray

**Target Pests = fleas, ticks, ants, cockroaches**

Precor 2000® Plus Premise Spray is a premise spray that packs a fast adulticide punch with two adulticides, Phenothrin and Permethrin, along with the lasting effects of Precor IGR.

- Covers 2,000 square feet.
- Fine mist, low odor formula that dries without leaving a residue.
- Water-based for better coverage.
- Heavier-than-air molecules go deep into the base of carpets and upholstery to control flea larvae.
- The best way to rid households of fleas and reduce callbacks.

### How It Works

Precor 2000 Plus Premise Spray contains Permethrin and Phenothrin to kill adult fleas fast. It also contains Precor IGR to prevent reinfestation for up to seven months. Precor IGR penetrates deep into the base of carpet and upholstery fibers, where pre-adult fleas live. Precor IGR targets fleas in the egg and larval stages of development, preventing them from producing new infestations of breeding, biting adults. Ultimately, that means more satisfied customers - and fewer costly callbacks.

### Application Sites

- Homes
- Garages
- Kennels
- Carpets and rugs
- Wood flooring and tile
- Drapery
- Furniture and cushions
- Pet sleeping and bedding areas

### Suspend

- Suspend is an excellent product to kill adult fleas found in and on carpeting and furniture. It also can be used to treat any crack and crevice that may be harboring larvae and adults.
- Suspend should be combined with an insect growth regulator such as Precor to provide the best control. Pay particular attention to areas where the host animal

spends their time wither resting or traveling. These areas will harbor the majority of the larvae and pupae and should be treated with 8.5 fl oz of finished spray per 100sq feet.

- However, the best results are obtained if 17 fl oz of finished spray (0.015%) is applied to the same 100 sq ft.
- Remain away from carpet until completely dried.

## Precor Insect Growth Regulator

- This product should be added to the suspend water misture, 1 ounce bottle per gallon.
- This is key to long term flea control
- Stops their life cycle in its tracks

## Ultracide

- Use Ultracide at the rate of 20 oz for up to 2,625 sq ft (10 oz for up to 1,300 sq ft).
- Carpeted areas may be vacuumed before treatment and after treatment has dried.
- Treat infested areas or areas which could be infested; these include rugs, carpets, upholstered furniture, pet beds and pet resting areas.
- Hold can at arms length and direct spray toward the area to be treated.
- Use a sweeping motion to apply product and back away from treated area while holding the can 36 inches away from the surface being treated.
- An area of 80 - 100 sq ft can be treated in approximately 10 seconds with Ultracide. When treating upholstered furniture, treat under cushions and areas where flea development occurs.

- Cover aquariums and fish bowls and remove birds from area prior to treating.
- Treated areas should be vacated during application.

**TO CONTROL TICKS AND FLEAS:** Old bedding should be removed and replaced with fresh, clean bedding after treatment. Pets should be treated with a registered product for flea and tick control in conjunction with this product.
